

Gelacquer™

LED/UV POLISH

APPLICATION INSTRUCTIONS

HOW TO APPLY:

- 1: Prep the nails as usual. Cleanse the nail very well with wiping solution. Wait for nails to be completely dry. (Chalky finish)
- 2: Apply a thin coat of Gelacquer LED basecoat to all 10 nails and then cure under LED light for 10 seconds; 30 seconds with UV lamp.
- 3: Remove the residue after it is completely cured with a wiping solution and let dry.
- 4: Apply a thin coat of desired color to all 10 nails. Cure under LED light for 10 seconds; 30 seconds with UV lamp.
- 5: Repeat Step 4 if color needs to be darker.
- 6: Apply Gelacquer topcoat to all 10 nails. Remove sticky residue after completely cured. Cure under LED light for 10 seconds; 30 seconds with UV lamp.

HOW TO REMOVE:

- 1: Buff the shine off the surface of the nails.
- 2: Wet cotton with acetone, wrap around the nail and cover with kitchen foil. Wait for a few minutes, then remove wrap one by one.
- 3: Take an orange wood stick and gently push on the loosened gel downwards.

The gel does not disintegrate in the acetone like acrylic polymer/powder does, it softens with acetone.

- 4: Gently condition the nails with cuticle oil or lotion.
